

Dear Project Manager for MONet, EMSL,

If the MONet proposal "Impacts of Cover Cropping on Soil Health in an Urban Farm in the MidSouth" submitted by Drs. XXX and XXX is selected, I affirm that they are authorized to access this site and to collect soils from their ongoing field experiment at Agricenter International.

As the Director of Research at Agricenter International, my responsibility is to coordinate and conduct research in agricultural crops. Agricenter International is located in Memphis, TN, has a \$524 million annual impact on the Mid-South region through our education, agribusiness, and agricultural research. Agricenter International hosts 1.3 million visitors annually and educates over 25,000 students annually. My staff and I will assist them in their efforts to conduct studies at Agricenter International. We will disseminate their research outcomes through our website at www.agricenter.org, and future outreach activities to the public, students, farmers, and the stake holders. Please feel free to contact me if you would like to discuss our commitment to this effort.
